Swagat Talukdar

Full Stack Engineer

Assam, India • +91 9706888933 • swagattalukdar007@gmail.com • https://swagat-portfolio.vercel.app
Aspiring graduate looking for an opportunity to work in web development. Highly poised,
dedicated, and passionate about learning and exploring technology with a strong education
in frontend languages.

SKILLS

HTML, CSS, Javascript, ReactJs, NodeJs, ExpressJs, MongoDB, Tailwind CSS

PROJECTS

MERN-REAL-ESTATE

The real estate web app is built using the MERN stack (MongoDB, ExpressJS, ReactJS, NodeJS) and offers a comprehensive set of features. Users can register and log in using their credentials, securely stored and managed through MongoDB. Once logged in, users can search for various properties, such as houses and apartments, using filters like price range, type, and location. The app integrates maps, allowing users to view property locations visually. Users can add properties to a personal list of favorites and even save them for later viewing. Additionally, the app supports real-time chat functionality using Socket.io, enabling live communication between users directly within the platform. This makes it easy for potential buyers, renters, or sellers to discuss properties in real time. The platform's combination of property search, filtering, map integration, and live chat ensures a dynamic and interactive user experience.

MERN-FOOD-DELIVERY

The food ordering web app is a full-stack application built using ReactJs for the front end, with MongoDB, ExpressJs, and NodeJs (MERN stack) on the back end. Users can register and log in using their credentials, which are securely stored in the MongoDB database with encryption and authentication handled by NodeJs and ExpressJs. Once logged in, users can browse the menu, with search and filter options for easy navigation, allowing them to select food items based on categories or preferences. The menu data is fetched from MongoDB and dynamically displayed using React's state management. The app integrates PayPal as the payment gateway for secure transactions at checkout, and orders are processed and stored in MongoDB. This feature-rich web app ensures a smooth, responsive user experience with security, scalability, and efficient order management as key priorities.
